

## CHAPTER 6

# TRIGGERS

It is the special kind of stored procedure that automatically executes when an event occurs in the database.

Triggers used:

1. Trigger name: on insert

Table: register

Time: after

Event: insert

Definition: INSERT INTO trig VALUES (null, NEW.rid, 'Farmer  
Inserted', NOW ())

2. Trigger name: on delete

Table: register

Time: after

Event: delete

Definition: INSERT INTO trig VALUES (null, OLD.rid, 'FARMER  
DELETED', NOW ())

3. Trigger name: on update

Table: register

Time: after

Event: update

Definition: INSERT INTO trig VALUES (null, NEW.rid, ' FARMER  
UPDATED', NOW ())
